

West Acre Trees

westacretrees.co.uk

Growing and supplying - from our North West Norfolk nursery - Plant Health Certified, cell grown, high quality native broadleaf and coniferous trees for forestry and woodland creation schemes.

Our current stock of over 200,000 trees also include trees and shrubs for the planting of hedgerows, shelter beds, woodland mix, scrub and field planting schemes to answer the demand for hedgerow replacement, conservation projects, river management and rewilding projects.

All our trees are grown in peat free root training cells to ensure a tree with a strong complete root architecture that allows for year round planting and better success in the trees onward development.
